Certifications

Node JS
Mongo DB

Honors-Awards

Silver Above & Beyond Award
Bronze Above & Beyond Award
Guest Speaker at NYAI (New York
A.I.) meetup
MLH HackNY - Hackathon
Spot Award

Publications

Predicting Financial Markets Using
Wisdom of Crowds
Bayesian Neural Network

Aniruddh Khera

Tech Lead @ TikTok
San Jose, California, United States

Summary

Tech Lead Engineer.
Skilled in System Design, Java, Go, Python.
Payments domain expert.
Interested in architecting backend services.

Experience

TikTok
Tech Lead
January 2023 - Present (3 years 4 months)
San Jose, California, United States

Global Payments

PayPal
Senior Software Engineer - Pricing & ForEx
February 2019 - January 2023 (4 years)
San Jose, CA, United States

23andMe
Machine Learning Engineer
June 2018 - August 2018 (3 months)
Mountain View, California

- Proposed solution to plugin arbitrary trained machine-learning models, agnostic of ML frameworks, languages and serialization techniques, managing lifecycle of models and serving predictions with low latency via REST APIs; Zeroing web application developers' efforts

- Automated process of populating 1000 Genome Project cluster with Phenotype values and uploading HBase snapshots to S3, useful for carrying integration test for various predictor evaluation services and GWAS (Genome Wide Association Study)

Courant Institute of Mathematical Sciences
Teaching Assistant

May 2017 - January 2018 (9 months)

New York

GE Healthcare

3 years 1 month

Senior Data Engineer

November 2016 - January 2017 (3 months)

Bangalore

Streamlined the ETL processing of medical devices' log data by developing UDFs / modules in Java and batch processing the data on Hadoop using Sqoop and Hive.

Software Engineer

July 2014 - November 2016 (2 years 5 months)

Member of Edison Engineering Development Program, one of the premier leadership programs at GE.

Projects:

1. Remote Healthcare- Maternal, Infant care

- Implemented RESTful APIs using Spring Boot and built UI components using React & Redux framework
- Developed a push notification system using RabbitMQ & Socket.io to track medical risks and appointments of patients; Integrated SMS gateways
- Reduced technical debt of the codebase to ~10% using Sonar; Wrote Junit test cases using Mockito with 80% code coverage

2. Virtual Tumor Board

- Conducted market research to understand oncology workflow and scope requirements from top 10 healthcare providers
- Singlehandedly developed and deployed the web application on AWS EC2, aggregating patient data from Medical Information Systems
- Channelized Tumor Board workflow and discussions by developing webRTC (streaming) application to virtually-connect oncologists
- Led a team of 6 engineers functioning as Lead Software Engineer; Recognized with 2 awards for the impact on the project

Software Engineering Intern

January 2014 - July 2014 (7 months)

Bengaluru, Karnataka

Magnetic Resonance Imaging (MRI) Host:

- GRx Annotations: Created plugin to set annotation preferences by diagnostician during run time
- Multi Slice Multi Angle (MSMA) selections: Designed algorithm enables to work with multiple (ROIs) Region Of Interests and move them simultaneously over the scan
- Ascertained relative orientation by applying 3D transformation in Euclidean geometry

Education

New York University

Master of Science (M.S.), Computer Science

Manipal Institute of Technology

Bachelor of Engineering (B.E.), Computer Science
